## SUMMARY

Software Developer with **3+ years of experience** building scalable, production-grade web applications across fintech, insurance, and SaaS domains. Expert in **Node.js, TypeScript, microservice architecture, gRPC, REST APIs**, and **AWS cloud services**, with hands-on frontend experience in **React.js**. Delivered payment integrations, and real-time systems serving **15+ lakh users** in production.

## TECHNICAL SKILLS

**Backend:** Node.js, Express.js, Hapi.js, gRPC, REST APIs, Microservices, JWT

**Frontend:** React.js, JSX, React Hooks, Axios, React Router

**Languages:** TypeScript, JavaScript, Object-Oriented Programming

**Databases:** MongoDB, PostgreSQL, Redis

**Cloud & DevOps:** AWS (S3, SES, SNS, Lambda, API Gateway, Secret Manager, CodePipeline), Datadog APM

**Messaging:** RabbitMQ, Apache Kafka, Cron Jobs

**Security:** AES Encryption/Decryption, JWT Refresh-Token Rotation

**Testing & Tools:** Cursor AI, Git, GitLab, Jira, Linux, Jest, SonarQube

## WORK EXPERIENCE

### Software Engineer | Appinventiv Technologies Pvt. Ltd., Noida

June 2022 – Present

- Re-architected a monolithic codebase into **10+ independent Node.js microservices** — reducing deployment coupling, improving fault isolation, and accelerating feature delivery.
- Designed **RESTful APIs and gRPC RPCs** with schema-level validation and migration scripts, consumed by React frontends and mobile clients.
- Contributed to **React.js frontend modules** — reusable components, multi-step forms, and Axios-powered API layers in collaboration with product and design teams.
- Achieved **38% faster data retrieval** for 15+ lakh users via query optimisation, indexing, schema redesign, and MongoDB change streams.
- Integrated **AWS services (S3, SES, SNS, Lambda, API Gateway, Secret Manager)** for secure, scalable cloud-native deployments.
- Delivered **zero-downtime microservice releases** and managed controlled rollouts on legacy monolithic systems.
- Wrote comprehensive **Jest test suites** reducing defects by **35%**; optimised async jobs with Kafka, RabbitMQ, and crons improving throughput by **25–30%**.
- Mentored junior developers, reducing their PR review cycles by **40%** through structured code review sessions
- Leveraged Cursor AI for accelerated development, code refactoring, and debugging, improving development speed and reducing boilerplate effort across microservices

## PROJECTS

### Toki – Payment Super App | [toki.mn](https://toki.mn)

Nov 2023 – Oct 2025 · Node.js · gRPC · TypeScript · MongoDB · PostgreSQL · Redis · Kafka · AWS

- Architected **10+ production microservices** using gRPC, TypeScript, and Node.js for a fintech super-app handling payments, wallets, and in-app features.
- Implemented **polyglot persistence** — MongoDB (documents), PostgreSQL (relational), Redis (caching), and Elasticsearch (full-text search) based on access patterns.
- Built real-time player communication and notifications using **WebSocket (Socket.io)** with room-based event broadcasting and persistent connections.
- Designed **Kafka and RabbitMQ event pipelines** for async inter-service messaging, event sourcing, and high-volume background job processing.
- Integrated **S3, Lambda, SES, SNS, API Gateway, Secret Manager** across the platform for storage, notifications, serverless compute, and config management.

## Generali Central Life Insurance (GCI) – Website Revamp | [generalicentrallife.com](https://generalicentrallife.com)

Jan 2026 – Present · React.js · Node.js · Microservices · Razorpay · AES Encryption

- Contributed to **React.js frontend migration** from Adobe AEM — built insurance quote forms, reusable components, and Axios-driven API integration.
- Architected **3-service microservice system**: web-api (React-facing), tp-api (third-party gateway), and auth-service (JWT session management).
- Engineered **AES encryption/decryption middleware** securing all sensitive insurance data in transit between frontend, internal services, and third-party providers.
- Integrated **Razorpay** for premium collection with webhook confirmation flows; designed a **stateless architecture** with user-journey event logging.

## Wicket.ai Platform | [wickets.ai](https://wickets.ai)

Oct 2025 – Jan 2026 · Node.js · Express.js · Stripe · AWS · Datadog

- Built **5-service microservice architecture** (user, auth, payment, third-party, common) with REST-based inter-service communication and shared utility libraries.
- Developed a full **Stripe subscription system** supporting multiple plan tiers, billing cycles, trial periods, and webhook-driven renewal workflows.
- Deployed via **AWS CodePipeline CI/CD**; used Secret Manager, S3, and SES for config, storage, and email; integrated **Datadog APM** for distributed tracing and alerting.

## Logging-Colorify – Open-Source npm Package

Sept 2023 – Jan 2024

- Published **open-source npm package** for color-coded, configurable logging with API documentation, reducing error detection time by 30%.

## EDUCATION

---

**B.Tech – Computer Science** | RKGIT Ghaziabad, AKTU | 2019–2023 | **81%**

**Senior Secondary (XII)** | PMS, Dhampur, Bijnor | 2018–2019 | **76%**

**Secondary (X)** | PMS, Dhampur, Bijnor | 2016–2017 | **86%**

## ACHIEVEMENTS & CERTIFICATIONS

---

- '**Budding Star Award**' — Recognised for outstanding performance, ownership, and rapid on-boarding to complex project requirements.
- '**Squad Award**' — Awarded for exceptional team output, sustained client satisfaction, and contribution to organisational profitability.
- Ranked 2nd** in the Technical Training Programme at Appinventiv Technologies across a competitive engineering cohort.
- Multiple professional certifications** in software engineering, and development best practices.
